## LLC BREXIT Series POST TOP LIGHT

Report Number: ITL48610  
 Total Luminaire Efficiency = 81.25%  
 IES Classification: Type III, Medium, Non-Cutoff

Report Number: ITL48623  
 Total Luminaire Efficiency = 81.72%  
 IES Classification: Type V, Semi-cutoff

### Photometrics:

The Model 424 Type III, coupled with the perforated LiteLid, Model 424 top and a 150W diffuse HPS lamp, produces 7792 candela at 67.5° vertical and 73.3° lateral (ITL48610). The Model 424 Type V, coupled with the perforated LiteLid, Model 424 top and a 150W diffuse HPS lamp, produces 3337 candela at 70° vertical (ITL48623). Both the Type III and V distributions are optimized with diffuse HPS and coated MH lamps. Use of clear lamps may produce reduced uniformity. Individual luminaire performance depends on the lamp center position and the reflector design chosen. Each luminaire design should be individually tested for proper classification. Please call for additional photometric data. Light center location for the Type V shown in report ITL 48623 is 2.7" down from upper rim.
